

System Administrator

IntelliFarms designs and manufactures sensor products that go into agricultural applications from grain storage and management - to weather data and automation in the fields. Our customers range from Farmers to Processors you'd recognize on the back of a box in the grocery store. We are well past our start-up phase and don't rely on outside capital. We are on the cutting edge of AgTech - and need your help to stay that way.

IntelliFarms expects its employees to set and meet challenges, to constantly improve performance, to innovate, to never stop learning, and to work for everyone around them, including our customers.

We are looking for an experienced System Administrator to manage, maintain and monitor our network, servers, VoIP system, information security, and local and remote users and their equipment.

You would be responsible for just under 100 users and systems and keeping them patched, upgraded and installed. Helping IntelliFarms employees by providing end user support is a key part of this role.

Most importantly, we move quickly. We need someone who can think on their feet, act independently, and confidently make decisions. We also need someone who is flexible in their job description. We may ask you to take on additional projects or challenges that might seem outside your job description. The ideal candidate is positive and flexible!

What we look for:

- Fluent in all things IT from the end workstation to virtual servers, networking equipment and VoIP phones.
- AWS, Google Cloud, or Azure Management experience
- Kubernetes experience
- Resourceful someone who can find answers as to why something isn't working.
- Organized, keeping track of all the various software packages we support and ensuring that our licenses are kept current.
- A Team Player - You will need to support various levels of employees with different needs.
- Articulate, the ability to explain the various pros and cons of any situation..
- Strong problem solver, and ability to work independently.
- Flexible - able to work at both our Olathe and Archie locations

What we use:

- Windows and Linux workstations, if you enjoy i3 you'll fit in with our Linux users.
- Windows and Linux servers, mainly for AD, WSUS, file servers and other various engineering software.
- VMWare for local servers
- Networking is done with pfSense and various trendnet switches.
- Switchvox and Flowroute allow us to communicate both internally and externally.
- Google Business Suite for our email platform.

What you should have:

- A degree in Information Technology or other related field.
- At least 3 years experience as a System Administrator.
- A desire to constantly learn and a drive to exceed others expectations.
- A passion for helping end users succeed.
- A respect for our farmers who are feeding the world and a desire to be a part of our mission to help them succeed.

If you think we might be a match for you, please respond with your resume attached.
